## Inverse Relations and Functions

## Bxplore Inverse Functions

(1) Online Activity Use graphing technology to complete the Explore. @ INQUIRY For what values of $n$ will $f(x)=x^{n}$
have an inverse that is also a function?

## Learn Inverse Relations and Functions

Two relations are inverse relations if one relation contains elements of the form $(a, b)$ when the other relation contains the elements of the form ( $b, a$ ).

Two functions $f$ and $g$ are inverse functions if and only if both of their compositions are the identity function.

Key Concepts • Inverse Functions
Words: If $f$ and $f^{-1}$ are inverses, then $f(a)=b$ if and only if $f^{-1}(b)=a$.
Example: Let $f(x)=x-5$ and represent its inverse as $f^{-1}(x)=x+5$.
Evaluate $f(7)$.
Evaluate $f^{-1}(2)$.
$f(x)=x-5$
$f^{-1}(x)=x+5$
$f(7)=7-5$ or 2
$f^{-1}(2)=2+5$ or 7

Not all functions have an inverse function. If a function fails the horizontal line test, you can restrict the domain of the function to make the inverse a function. Choose a portion of the domain on which the function is one-to-one. There may be more than one possible domain.

## Example 1 Find an Inverse Relation

GEOMETRY The vertices of $\triangle A B C$ can be represented by the relation $\{(2,4),(-3,2),(4,1)\}$. Find the inverse of the relation. Graph both the original relation and its inverse.

Step 1 Graph the relation.
Graph the ordered pairs and connect the points to form a triangle.

(continued on the next page)

Today's Goals

- Find inverses of relations.
- Verify that two relations are inverses by using compositions.

Today's Vocabulary inverse relations inverse functions

> Think About It!
> Write a function that does not pass the horizontal line test.

Sample answer: $f(x)=x^{2}$

> Go Online You can complete an Extra Example online.

Think About It!
Describe the graph of the inverse relation.

Sample answer: It is a reflection in the line $y=x$.

## Study Tip

Inverses If $f^{-1}(x)$ is the inverse of $f(x)$, the graph of $f^{-1}(x)$ will be a reflection of the graph of $f(x)$ in the line $y=x$.

Go Online
You can learn how to graph a relation and its inverse on a graphing calculator by watching the video online.

Step 4 Replace $y$ with $f^{-1}(x)$.
Replace $y$ with $f^{-1}(x)$ in the equation.
$y=\frac{x-2}{3} \rightarrow \underline{f^{-1}(x)}=\frac{x-2}{3}$
The inverse of $f(x)=3 x+2$ is $f^{-1}(x)=\frac{x-2}{3}$.

Step 5 Graph $f(x)$ and $f^{-1}(x)$.

## Check

Examine $f(x)=-\frac{1}{2} x+1$.
Part A Find the inverse of $f(x)=-\frac{1}{2} x+1$.

$$
f^{-1}(x)=-2 x+2
$$

Part B Graph $f(x)=-\frac{1}{2} x+1$ and its inverse.

Go Online You can complete an Extra Example online.

## Example 3 Inverses with Restricted Domains

Examine $f(x)=x^{2}+2 x+4$.

## Part A Find the inverse of $f(x)$.

$$
\begin{aligned}
f(x) & =x^{2}+2 x+4 & & \text { Original function } \\
\underline{y} & =x^{2}+2 x+4 & & \text { Replace } f(x) \text { with } y . \\
\underline{x} & =y^{2}+2 y+4 & & \text { Exchange } x \text { and } y . \\
x-4 & =y^{2}+2 y & & \text { Subtract } 4 \text { from each side. } \\
x-4+1 & =y^{2}+2 y+1 & & \text { Complete the square. } \\
x-3 & =(y+1)^{2} & & \text { Simplify. } \\
\pm \sqrt{x-3} & =y+1 & & \text { Take the square root of each side. } \\
\underline{-1} \pm \sqrt{x-3} & =y & & \text { Subtract } 1 \text { from each side. } \\
f^{-1}(x) & =-1 \pm \sqrt{x-3} & & \text { Replace } y \text { with } f^{-1}(x) .
\end{aligned}
$$

## Part B If necessary, restrict the domain of the inverse so that it is a function.

Because $f(x)$ fails the horizontal line test, $f^{-1}(x)$ is not a function. Find the restricted domain of $f(x)$ so that $f^{-1}(x)$ will be a function. Look for a portion of the graph that is one-to-one. If the domain of $f(x)$ is restricted to $[-1, \infty)$ then the inverse is $f^{-1}(x)=-1+\sqrt{x-3}$.

If the domain of $f(x)$ is restricted to $(-\infty,-1]$,
 then the inverse is $f^{-1}(x)=-1-\sqrt{x-3}$.

## Example 4 Interpret Inverse Functions

TEMPERATURE A formula for converting a temperature in degrees
Fahrenheit to degrees Celsius is $T(x)=\frac{5}{9}(x-32)$.
Find the inverse of $T(x)$, and describe its meaning.

$$
\begin{aligned}
T(x) & =\frac{5}{9}(x-32) & & \text { Original function } \\
\underline{y} & =\frac{5}{9}(x-32) & & \text { Replace } T(x) \text { with } y . \\
\frac{x}{x} & =\frac{5}{9}(\underline{y}-32) & & \text { Exchange } x \text { and } y . \\
\frac{9 x}{5} & =\underline{y-32} & & \text { Multiply each side by } \frac{9}{5} . \\
\frac{9 x}{5}+32 & =y & & \text { Add } 32 \text { to each side. } \\
T^{-1}(x) & =\underline{\frac{9 x}{5}+32} & & \text { Replace } y \text { with } T^{-1}(x) .
\end{aligned}
$$

$T^{-1}(x)=$ can be used to convert a temperature in degrees Celsius to degrees Fahrenheit.

Go Online to see Part B of the example on using the graph of $T(x)$ and $T^{-1}(x)$.

Think About It! Find the domain of $T(x)$ and its inverse. Explain your reasoning.

## Sample answer:

Algebraically, the domain of both $T(x)$ and $T^{-1}(x)$ are all real numbers because temperatures can be positive and negative and do not have to be integer values.

Think About It!
If $j(x)$ and $k(x)$ are inverses, find $[k \circ j](x)$.
$x$

## Watch Out!

Compositions of Functions Be sure to check both $[f \circ g](x)$ and $[g \circ f](x)$ to verify that functions are inverses. By definition, both compositions must result in the identity function.

Go Online to see another example on verifying inverse functions.

## Talk About It!

Find the domain of the inverse, and describe its meaning in the context of the situation.

Sample answer: The inverse represents the radius of a cylinder with a height of 5 inches in terms of its volume. The domain is all positive real numbers because the radius cannot be negative.

## Learn Verifying Inverses

## Key Concept • Verifying Inverse Functions

Words: Two functions $f$ and $g$ are inverse functions if and only if both of their compositions are the identity function.

Symbols: $f(x)$ and $g(x)$ are inverses if and only if $[f \circ g](x)=x$ and $[g \circ f](x)=x$.

## Example 5 Use Compositions to Verify Inverses

## Determine whether $h(x)=\sqrt{x+13}$ and $k(x)=(x-13)^{2}$ are inverse functions.

Find $[h \circ k](x)$.

$$
\begin{aligned}
{[h \circ k](x) } & =h[k(x)] & & \text { Composition of functions } \\
& =h\left[\left(\underline{(x-13)^{2}}\right]\right. & & \text { Substitute. } \\
& =\sqrt{(x-13)^{2}+13} & & \text { Substitute again. } \\
& =\sqrt{x^{2}-26 x+169+13} & & \text { Distribute. } \\
& =\sqrt{x^{2}-26 x+182} & & \text { Simplify. }
\end{aligned}
$$

## Check

Determine whether $f(x)=\frac{x}{9}+\frac{4}{3}$ and $g(x)=9 x+12$ are inverses.
Explain your reasoning. No; $[f \circ g](x)=x+\frac{8}{3}$ and $[g \circ f](x)=x+24$.

## Example 6 Verify Inverse Functions

## GEOMETRY The formula for the

 volume of a cylinder with a height of 5 inches is $V=5 \pi r^{2}$. Determine whether $r=\sqrt{\frac{V}{5 \pi}}$ is the inverse of the original function.Find $V \circ r$.
Find $r \circ V$.

$$
\begin{array}{rlrl}
V & =5 \pi r^{2} & r & =\sqrt{\frac{V}{5 \pi}} \\
& =5 \pi\left(\sqrt{\frac{V}{5 \pi}}\right)^{2} & & =\sqrt{\frac{5 \pi r^{2}}{5 \pi}} \\
& =5 \pi\left(\frac{V}{5 \pi}\right) & & =\sqrt{r^{2}} \\
& =V & & =r
\end{array}
$$

$r=\sqrt{\frac{V}{5 \pi}}$ is the inverse of $V=5 \pi r^{2}$.
